Heat Exposure — layers in each heat mode

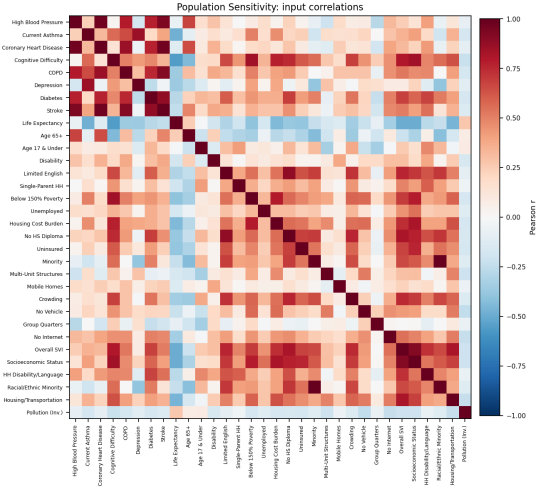

Heat mode	Layers averaged into the mode score
Daytime heat	Mean Daily Maximum Temperature 85th Percentile Daily Maximum Temperature 99th Percentile Daily Maximum Temperature Annual Maximum Temperature
Nighttime heat	Mean Overnight Minimum Temperature 90th Percentile Overnight Minimum Temperature No-Relief Night Fraction
Humid heat (WBGT)	85th Percentile Wet-Bulb Globe Temperature (WBGT) 99th Percentile Wet-Bulb Globe Temperature (WBGT)
Surface temperature	Mean Land Surface Temperature (Landsat)

Each mode score = mean of its z-scored layers, percentile-ranked.

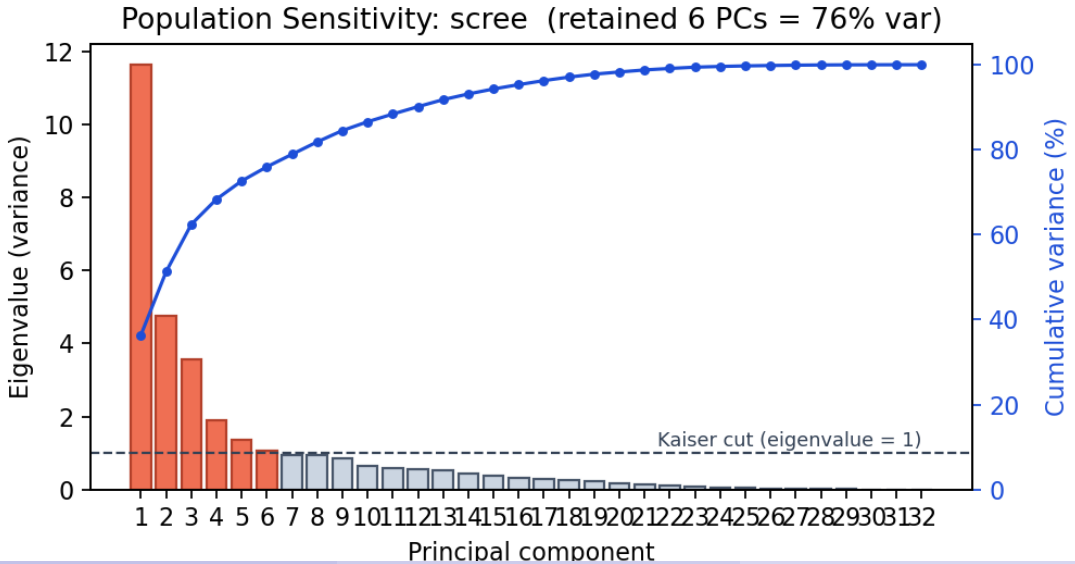

Heat modes are distinct hazards

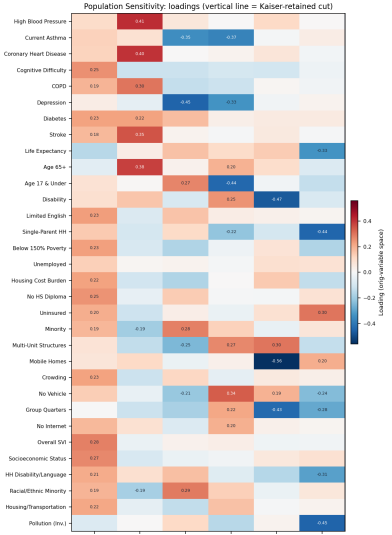

Population Sensitivity — input correlations

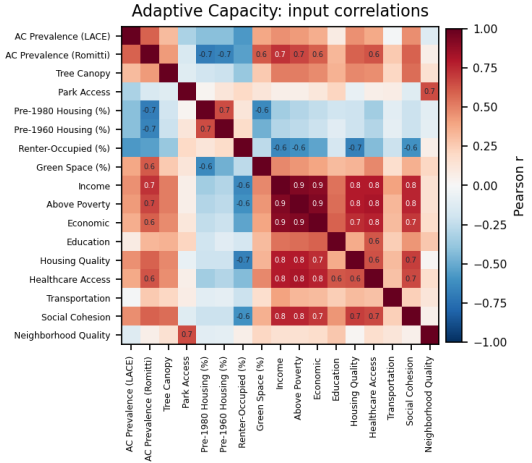

Population Sensitivity — variance (scree)

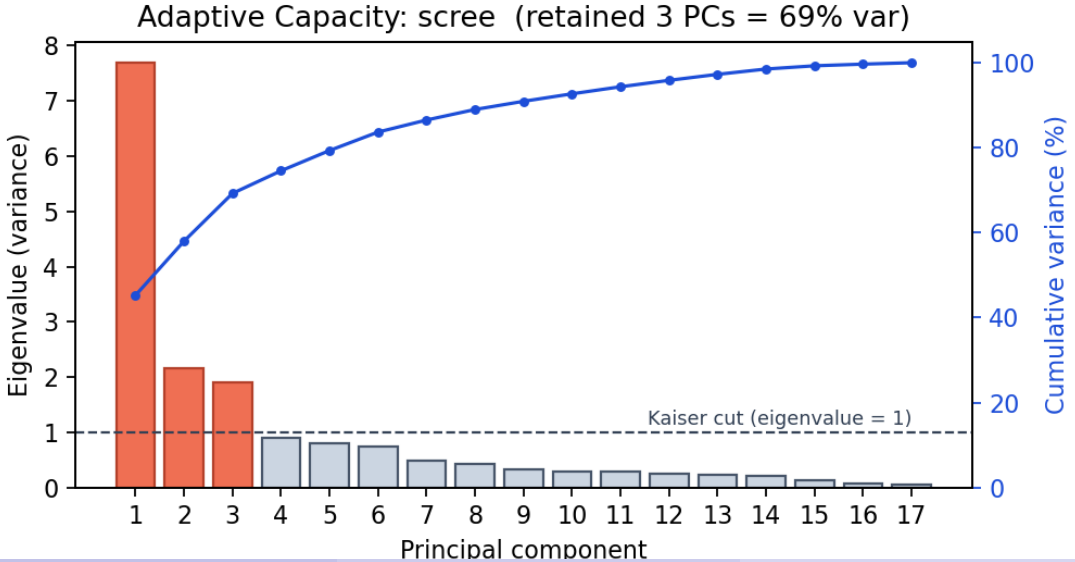

Population Sensitivity — loadings on each PC

Adaptive Capacity — input correlations

Adaptive Capacity — variance (scree)

Adaptive Capacity — loadings on each PC
